Environmentalists want to do their own flood control study

Nevada County group wants to look at options besides dams

Harold Kruger Appeal-Democrat

Dismayed with the Yuba County Water Agency's flood control plan, the South Yuba River Citizens League wants to come up with its own.

SYRCL officials today will ask Nevada County supervisors to endorse its request for a \$180,000 grant from Calfed for the \$250,000 project.

The Nevada County group proposes a 15-month Yuba River Ecological and Flood Control Assessment project for non-dam alternatives.

"This is not meant to displace any other efforts," said Shawn Garvey, SYRCL's executive director. "It's not meant to displace the Yuba County Water Agency's proposal, and it's not meant to displace the Army Corps' proposal. It's meant to investigate additional tools that are not being looked at."

Garvey said his group, once it settles on its flood control strategy, wants to work with Yuba, Nevada and Sierra counties to obtain state and federal funds "to implement a watershed plan that protects residents and water quality simultaneously. We think it can be done."

In a memo to Nevada County supervisors, Garvey described it as a "stakeholder-based ecological and flood control assessment study that will bring upper and lower Yuba watershed residents and interests together to craft a regional solution to the problem of flood control in the Yuba watershed."

Donn Wilson, the Water Agency's engineer-administrator, said the agency has tried to work with SYRCL — with no success.

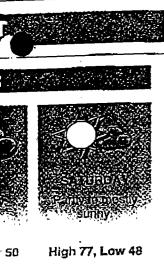

"The frustrating part is they continue to complain we have not adequately looked at alternatives that they like," Wilson said. "We continue by telephone and multiple letters to ask them to come sit down with us and our consultants and go over all the bases for not moving forward with some of the alternatives they like. They continue to not do that."

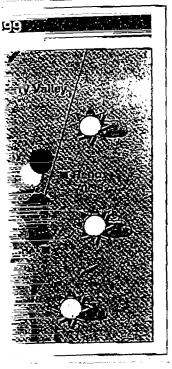

But, according to Garvey, "They want their consultants to tell us why they can't do anything else. We don't have time for that."

RIVER: New flood study

From A1

The Water Agency is in the latter stages of its study of options that will give Yuba County a 500year level of flood protection.

They include enlarging Bullards Bar, Lake Oroville and Thermalito Afterbay to hold more water or increasing their flood reservations.

New reservoirs also are under active consideration. Proposed sites include Freemans Crossing, Edwards Crossing, Parks Bar, Dry Creek and Waldo. The San Francisco Examiner on Sunday reported on the Waldo proposal because it could affect the Spenceville Recreation and Wildlife Refuge.

The agency's consultants discarded non-structural alternatives, such as flood-proofing buildings, relocating people and property from the floodplain and enlarging river channels.

"We've looked at these things, and we think we looked at them hard and in a good-faith manner," Wilson said. "They do have the potential to work, but they carry very big dollars, and we haven't found a place to get those dollars, so we continue to look for options that will provide the protection we need and have the ability to pay for themselves or bring enough revenue to the table so they can be paid for."

Levee raising and levee setbacks would allow more water to flow down the rivers, but the Water Agency would be responsible for addressing downstream impacts to Sacramento, a cost that could reach \$500 million, the agency's consultants said.

"Obviously, most of this community in Yuba, Sierra and Nevada counties don't believe that many common tools for increasing flood protection have been fully investigated," Garvey said.

He cited forest practices, meadow restoration, levee setbacks and paying farmers for flood easements.

"There are a lot of ways to enhance flood protection that can be done quickly and would have the full support of almost everyone in Nevada, Yuba and Sierra counties," Garvey said. In his memo to Nevada County supervisors, Garvey said the Water Agency's dam alternatives "conflict with Calfed's vision for more natural ecological processes ... (and) are also inconsistent with the Nevada County Board of Supervisors' stated desire to keep new dams off the South Yuba River."

According to Garvey, "Residents in the upper watershed find themselves the target of large dam proposals, which, in turn, threaten their homes and property with condemnation and removal."

Dialogue between foothill and valley interests "continues to grow more distant, emotionally charged and unproductive;" Garvey wrote.

SYRCL wants to "counter this atmosphere of conflict and discord in the watershed" with its study process, he said.

"If they can come up with a way to provide our flood control and pay for it, we will be forever grateful to them," Wilson said.

AT A GLANCE

Yuba County Water Agency consultants are studying the following flood control options, individually and in different combinations. They will make a recommendation to directors in a few weeks.

- Increase flood storage space by 45,000 acre-feet without an outlet enlargement at Thermalito Afferba
- Increase flood storage space at Bullards Bar by 100,000 acre-feet with additional outlet capacity for 20,000 cubic feet per second.
- ▶ Enlarge Bullards Bar by 50,000 acre-feet.
- ▶ Enlarge Lake Oroville by 75,000 acre-feet.
- ▶ Enlarge Thermalito Afterbay by 45,000 acre-feet.
- Increase Lake Oroville flood storage reservation by 450,000 acre-feet with 75,000 cfs additiona outlet capacity.
- Increase Bullards Bar flood storage by 100,000 acre-feet with 20,000 cfs additional outlet capacity.
- ▶ Enlarge Bullards Bar by 50,000 acre-feet.
- Increase Lake Oroville flood storage reservation by 1 million acre-feet without an outlet enlargement.
- New reservoirs at Parks Bar. Edwards Crossing, Waldo, Dry Creek, Freemans Crossing and Narrows.

COMPLEX: Retail project planned
